Results

Introduction

Within the scope of the Citizenship and Development project, students in the 10th form of the VET course in TGPSI, from Maia Secondary School, developed a project that aims to create Apps, to improve the lives of the students at the school they attend.

Methodology

The teaching-learning methodology used follow the technological educational program APPS for GOOD, that encourage students to think about the world around, become active and aware citizens, by trying to solve the problems that they find, contributing to a better world.

Conclusions

The activities developed allowed students to reflect on problems, needs or potential for improvement in the school experience, in their organization, in the inclusion and responsible participation of all students, resorting to mobile phone applications. The students developed skills of autonomy, leadership, curiosity, initiative, creativity, adaptability and social and global sense.
